1982 WISCONSIN AGRICULTURAL STATISTICS

This publication includes the latest information on agriculture in Wisconsin. It continues the series of "Wisconsin Agricultural Statistics" started in 1965. In general, this report shows State data for the crop years 1974-81 and livestock numbers for January 1, 1974-82. County estimates that are available in this report cover the past 2 years.

This publication, the issues of Wisconsin Agricultural Statistics for the years 1965 through 1981 and Special Bulletins No. 78 and 80 and their supplements complete a series of agricultural information back through 1955.

Contributions to these reports would not be complete without an expression of appreciation to the technical and clerical staff of the Wisconsin Agriculture Reporting Service for their devoted service. A special thanks is due to the field and telephone enumerators who are essential to the data collection process. Photos in this publication were provided by the Wisconsin Department of Agriculture, Trade, and Consumer Protection.

Carrol D Spencer

Carrol D. Spencer
Statistician in Charge

This edition of the 1982 Wisconsin Agricultural Statistics contains a supplemental section on Corn. This section includes data on corn acreage, yield, production, plant population, planting and harvesting dates, disposition, supply, prices, stocks, exports, and per capita consumption.

June, 1982

TABLE OF CONTENTS

GENERAL

Wisconsin Agriculture 2
Wisconsin's Rank in Nation's Agriculture 3
Gross and Net Farm Income 4
Farm Production Expenses 4
Value of Farm Real Estate and Taxes 4
Cash Receipts from Farm Marketings, State 5
Farms and Land in Farms, State and County 6, 7
Agricultural Land Sales, State and County 8, 9
Cash Receipts from Farm Marketings, County 10, 11
Farm Prices and Income 12
Prices Received for Farm Products 13, 14
Prices Paid for Feed 15
Feed Price Ratios 16
Prices Paid for Farm Production Items 16, 17
Monthly and Annual Precipitation 18
Monthly and Annual Temperature 19

CROPS

Crop Season Overview 20
Crop Summary 21
Crop Production Index 22
Field Crops, Production, Farm Use, Sales, and Value 22, 23
Grain Stocks, by Quarters, State 24, 25
Corn for Grain, State and County 26, 27
Corn for Silage, State and County 28, 29

LIVESTOCK AND POULTRY

Number and Value of Livestock 53
Livestock and Poultry Farms 54
Cattle and Calves, Number, Production and Income 55
All Cattle and Calves, County 56
Beef Cows and Heifers, County 57
Calf Crop, County 58
Livestock Slaughter, State 59
Cattle and Calves on Feed, State 60
All Hogs and Pigs, County 61
Exports of Hogs, State 62
Hogs, Inventory, Production, Disposition & Income 63
Sheep and Lambs, Production and Income 64
Stock Sheep, County 65
Layers and Egg Production, County 66, 67
Poultry and Eggs, Production and Income 68
Turkeys and Broilers, Production and Income 68
Egg Production and Layers, State 69
Honey and Beeswax Production, State 69
Mink, State 69

DAIRY

Dairy Overview 70
Milk Production, Disposition, Sales and Income . . . 71
Milk Cows and Production, County 72, 73
Milk Production and Cow Numbers, State 74
Manufactured Dairy Products, State 75, 76
Number of Dairy Plants, State 76
Exports of Dairy Cattle and Calves, State 76, 77
Milk Prices and Test, State 78, 79

SPECIAL SUPPLEMENT – CORN

Production, Marketing, and Prices 80-94

FOREWORD

The year 1981 was one of record agricultural production in Wisconsin. Milk production, at over 22.7 billion pounds, set an all-time high. With the high level of production, dairy farmers across the state faced the reality of continued dairy product surpluses and decreasing milk prices during the year. Record corn production in the U.S. and Wisconsin in 1981 helped put downward pressure on feed grain prices. Consequently, milk-feed ratios remained relatively favorable throughout the year, somewhat offsetting the lower milk prices. As the year ended, Wisconsin dairy farmers were faced with the prospect of putting restraints on production and becoming more actively involved in milk marketing.

Over the next decade, marketing our agricultural products will be a major challenge. Part of the Wisconsin farmer's market is now the world market. The Department of Agriculture, Trade, and Consumer Protection has been actively involved in international marketing. These activities directly benefit the Wisconsin farmer and Wisconsin businesses.

The market economy can only function efficiently if information is available to agricultural producers and marketers. That is why the crop and livestock estimating work was started over 100 years ago and remains so important today. The Wisconsin Agriculture Reporting Service provides information on acreages, crop, livestock and dairy production, prices, weather, exports, and other indicators the market must have to operate effectively. The Service maintains a reputation for reliability and objectivity, and the estimates are the benchmark for Wisconsin's agricultural industry – from producer to processor to consumer.

This annual statistics bulletin is the 18th in a series that began in 1965. It has been extremely popular with users of agricultural data. Much of the information included in the bulletin is published on a weekly, monthly, or annual basis by the Wisconsin Agriculture Reporting Service. The statistical estimates are obtained through surveys of farmers and other agricultural people who voluntarily provide the data. We appreciate these people who faithfully respond to agricultural surveys.

La Verne Ausman

Trade and Consumer Protection

WISCONSIN AGRICULTURE

Wisconsin is truly America's Dairyland. During 1981 Wisconsin dairy farmers produced over 22.7 billion pounds of milk, a record high and over 17 percent of the nation's total output. Cash receipts from dairying in 1981 came to over $2.9 billion, up 7 percent from 1980. Wisconsin is the nation's leading cheese-producing state, accounting for 37 percent of the U.S. total in 1981. Wisconsin is also the leading state in the production of butter and nearly all other major manufactured dairy products.

Wisconsin is also a consistent crop production leader, ranking first in alfalfa hay, all hay, and corn for silage. In addition, Wisconsin is also a national leader in the output of many vegetable crops. Wisconsin corn growers had a very productive year in 1981. During the year, Wisconsin moved ahead of Ohio to rank sixth nationally in corn production.

Wisconsin's farm economy was strong in 1981, led by record high milk production. In addition to the record milk production, 1981 highlights included record high corn and soybean production. However, continued high interest rates, rising production costs, and decreasing milk and crop prices contained some of the economic gains.

Total cash receipts from farm marketings in 1981 rose to $4.9 billion, an increase of 3 percent from 1980. The index of prices received by Wisconsin farmers for all farm products sold in 1981 increased 18 points during the year to an average of 288 percent of the January-December 1967 base. Despite the jump in the prices received index, Wisconsin farmers experienced an even larger increase in the prices paid index. The 1981 average index of prices paid for commodities and services, interest, taxes, and wage rates was 312 percent of the 1967 base. This was a 31 point increase from the 1980 average of 281.

The ratio of prices received to prices paid averaged 92 percent for 1981. During 1980 the ratio averaged 96 percent. The decreasing ratio in 1981 indicated that the prices Wisconsin farmers paid for production inputs significantly out-paced the prices they received for farm commodities.

The 1981 crop season was very productive despite an extremely dry May and frequent rains during the month of October. Growing season rainfall, from April 1 to September 30, was above normal but was less than the heavy amounts of precipitation that fell during that period in 1980. Growing degree days, on a statewide basis, averaged 2 percent below normal for the 1981 crop season.

The number of farms in Wisconsin as of January 1, 1982 was estimated at 92,000, down 1,000 from January 1, 1981. A farm is defined as a place with an annual sale of agricultural products of $1,000 or more.

Land in farms, as of January 1, 1982, was estimated at 18.5 million acres, down 100,000 acres since January 1, 1981. Over 5 million acres have been removed from agriculture since 1942 when a high of 24 million acres was in farmland in Wisconsin. As farm numbers decline, the average farm size increases. Average farm size in Wisconsin, as of January 1, was 201 acres.

A number of economic and social factors have contributed to the decline in farms and farmland. Improved and high technology have resulted in larger and more efficient farm units. The disappearance of smaller farms as well as their merger into larger units has reduced the total number of farms. Reasons for

the reduction of total farmland include the expansion of recreational lands, urban growth, and additions to the highway system.

A large investment is required to operate a modern farm. Total production expenses on Wisconsin farms in 1980 approached $4.2 billion, a gain of 16 percent from 1979. Farm production expenses have increased by more than $1 billion since 1978.

Interest, taxes, and wages have continued to increase. Interest on farm mortgage debt totaled $238 million for 1980, an increase of $43 million from a year earlier. Taxes on farm property amounted to about $226 million in 1980, up $18 million from 1979. Depreciation and consumption of farm capital came to nearly $841 million, up over $105 million from the previous year.

WISCONSIN'S RANK IN THE NATION'S AGRICULTURE

Commodity	Rank among states	Production		Percent of U. S.	Leading State

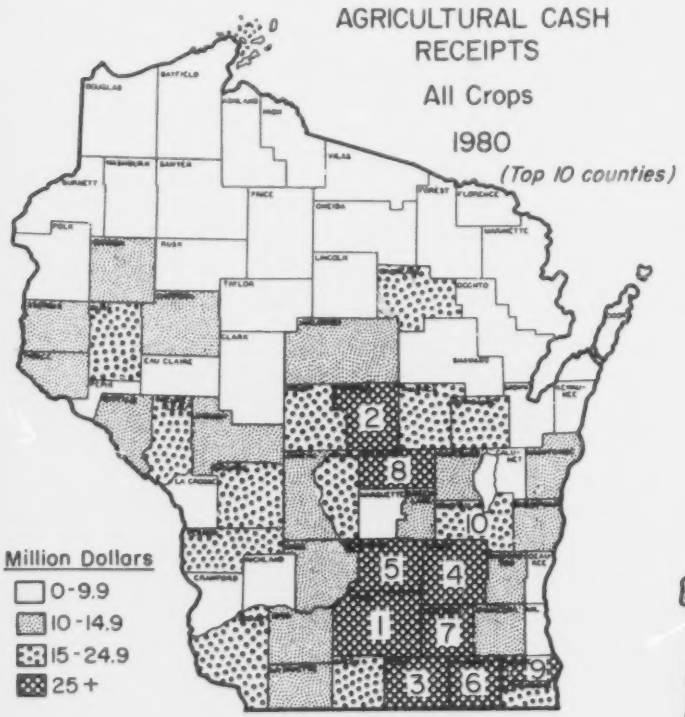
FARM PRICES AND INCOME

Cash receipts from farm marketings totaled $4.9 billion during 1981, an increase of 3 percent from 1980. Receipts from livestock and livestock related products came to $3.8 billion for the year, up 2 percent from 1980. Livestock and livestock products contributed 78 percent of Wisconsin's agricultural cash receipts during the year. Cash receipts from dairy products totaled $2.9 billion during the year, which was a gain of 7 percent from the previous year. Over 60 percent of Wisconsin's agricultural income comes from dairying. Record milk production and relatively strong milk prices contributed to the gains in dairy farm income.

Farm income from crops totaled nearly $1.1 billion for the year, a gain of 10 percent from 1980. Record corn and soybean production in 1981 helped contribute to the gains in cash receipts from crops. Crops contributed 22 percent of Wisconsin's total agricultural cash receipts during the year.



Milk prices averaged $13.42 a hundredweight in 1981, which was a 73-cent increase over 1980's average of $12.67. The year 1981 was the eighteenth consecutive year that the annual milk price exceeded the previous year. Prices received for milk cow replacements averaged $1,180 per head in 1981, up $20 from the 1980 average of $1,160. Cull cow prices averaged $42.50 a hundredweight for the year, down $4.20 from 1980. Prices received for calves averaged $103.00 a hundredweight, a decrease of $3.00 from the previous year.

Steers and heifers averaged $58.00 a hundredweight in 1981, down $5.20 from a year earlier and the lowest average since 1978. Prices peaked in September at $59.60 and then slipped to the yearly low of $53.30 in December. Hog prices averaged $43.10 a hundredweight in 1981, up $5.10 from the previous year and the highest average since 1978 when hog prices averaged $45.90.

The season average price of corn during 1981 dipped to $2.25 per bushel, down 71 cents from 1980, down 18 cents from 1979, and the lowest season average price since 1978 when corn averaged $2.00 per bushel. Corn prices peaked at $3.16 in April and then gradually slid to a yearly low of $2.15 in December.

The season average price of oats was $1.65 per bushel in 1981. This is up 5 cents from 1980 and up 35 cents from the 1979 price of $1.30. Oats peaked at $1.84 in March. All wheat prices averaged $3.50 a bushel during the year, down 34 cents from the previous year and down 20 cents from 1979. Wheat prices hit their peak in January at $4.24.

Soybeans, at an average of $6.25 per bushel, were down $1.00 from 1980. Soybean prices hit their high in April at $7.10 and sank to their yearly low in October at $5.75.

Baled alfalfa hay prices averaged $55 per ton in 1981, up $14 from 1980 and the highest average since 1977 when alfalfa averaged $66.92. All other hay averaged $43.62 a ton during the year, up $15.12 from 1980.

Motor oil, heavy duty (detergent), per gallon	4.75	3.90	2.99	2.70
Grease, per 35-pound pail	29.53	24.95	19.43	16.75
Storage batteries, cpr 220-310 amps	51.80	51.93	45.45	39.53
Spark plugs	1.80	1.69	1.58	1.44
Antifreeze, permanent type, per gallon	5.15	4.87	4.15	3.82
Oil filters, cartridge refill	3.98	3.70	3.35	3.16
Tires, tractor, rear, 18.4-34, 6-ply	400.25	366.25	310.50	284.25
Tires, truck, 7.00-15, 6-ply	64.23	60.03	52.20	47.93
Tires, auto, tubeless, bias-belted, E78-14	50.95	50.95	45.88	43.43
FARM SUPPLIES				
Nail hammers, 16-oz. head, with handle	12.35	10.90	9.57	8.68
Nails, 8d, common, per pound	.66	.61	.54	.50
Shovel, aluminum grain scoop	22.50	20.85	18.55	16.55
Pitchforks, 4-tine	17.15	15.40	13.90	12.35
Hoes, 7-inch blade	9.20	8.37	7.63	6.88
Grease gun, hand pressure, 1-pound capacity	9.19	8.51	7.68	7.14
Metal pails, heavy, tin-plated, 12-quart	4.98	4.81	5.62	5.18
Hand sprayer, pressure, 3-4 gallon capacity	30.55	27.65	24.90	23.10
Acetylene welder outfits, complete	222.50	213.00	192.00	181.50
Post, line fence, steel	3.03	2.88	2.58	2.37
Barbed wire, galvanized, 12½ gauge, 4-point, per 80-rod spool	39.23	37.00	33.68	30.63
Field and stock fence, 6" stay wire sp., 32" high, per 20-rod roll	79.10	75.28	67.13	60.03
Battery fence charger, solid state electronic	55.35	53.55	41.85	39.50
Staples, fence, per pound	7.30	.67	.59	.55
Adjustable end wrench, 10-inch	10.25	9.41	8.42	7.58
Chain saw, gasoline, 20-inch	329.75	295.00	271.00	258.25
Iron pipe, galvanized, 1¼-inch, i.d., per foot	1.85	1.60	1.50	1.35
Rope, polypropylene, ½-inch, per 100 feet	19.03	18.10	19.85	18.78
Baler twine, per 40-pound bale	24.90	23.95	16.48	14.75
Electric cable, indoor, non-metallic sheathed, 2-wire, per 100 ft.	19.65	19.50	16.10	13.75
Plastic tubing, 1-inch, i.d., per foot	.25	.24	.22	.21
BUILDING MATERIALS				
Rough boards, for farm fences and construction, per 1,000 bd. ft.	463.33	466.83	454.83	401.00
Dressed boards, 1", pine, s4s, standard and better, per 1,000 bd. ft.	612.50	600.00	580.17	504.17
Framing lumber, 2" x 4", fir, standard and better, per 1,000 bd. ft.	376.50	404.33	429.83	393.17
Asphalt shingles, mineral surface, approx. 240 lb. per sq.	30.47	30.73	26.30	23.68
Galvanized steel roofing, 28-29 gauge, per 100 sq. ft.	41.97	39.72	37.18	34.15
Portland cement, 94 lb. net	5.46	5.07	4.58	4.05
Concrete blocks, 8" x 8" x 16", per 100	82.72	76.43	68.12	60.62
House paint, exterior latex, per gallon	15.63	14.53	13.50	12.63
FERTILIZER AND LIMING MATERIALS				
Mixed fertilizer, 6-24-24, per ton	218.75	211.75	172.00	148.25
Urea, 45-46% N, per ton	243.75	223.75	184.25	169.00
Superphosphate, 44-46% P_2O_5, per ton	238.50	245.50	189.00	152.50
Muriate of potash, 60% K_2O, per ton	153.75	138.25	116.25	98.25
Anhydrous ammonia, per ton	247.00	227.00	186.50	168.00
Nitrogen solutions, 28% N, per ton	137.50	131.00	111.00	107.75
Ground limestone, per ton	15.00	13.48	11.58	10.50

1/Units are each, unless otherwise specified.

CROPS

The crop production index for 1981 averaged 130 percent of the 1967 base year. This is two points higher than the previous high of 128 for the 1977 crop year. Both corn for grain and soybeans had record high production due to increased acreage and very good yields. Corn yields in 1981 averaged 108 bushels, a record high. Hay production was down in 1981 as winterkill and a dry May reduced first crop yields. Oat production was the lowest since 1907. Wheat production was up in 1981 as harvested acres were the highest since 1948. Production increases were reported for potatoes, tobacco, and sweet corn. Production declines were reported for canning peas, cranberries, apples, and cherries.

On a statewide basis, growing degree days averaged 2 percent below normal for the 1981 crop year. The following crop reporting districts reported below-average accumulations of growing degree days this crop season: northwest, north central, east central, and southeast. The northeast, west central, and southwest districts reported above-average accumulations. Growing degree day accumulations were about normal in the central and south central districts. Growing conditions this past year were the best in the west central crop reporting district, where growing degree accumulations averaged about 2 percent above normal.

Temperatures for the June 1 to September 30 period averaged 65.1 degrees, .8 degrees below the 30-year average of 65.9. Above-normal temperatures were recorded in the north central, northeast, west central, and central districts. Below-normal temperatures were recorded in the east central, southwest, south central, and southeast districts. Normal temperatures were recorded in the northwest district. Warmest temperatures were reported from the southwest district, which reported a four-month average of 67.1 degrees. Coolest temperatures were recorded in the north central district, where June-September temperatures averaged 62.1 degrees.

Precipitation for the 1981 growing season, from April 1 through September 30, totaled 22.57 inches, up 1.2 inches from the 30-year average of 21.37 inches. On a statewide basis, growing season rainfall averaged 6 percent above normal. Precipitation totals were above normal in the west central, east central, southwest, south central, and southeast crop reporting districts. Rainfall was below normal in the northwest,

north central, northeast, and central districts. Precipitation during the growing season was heaviest in the southwest district, which recorded 25.97 inches, 17 percent above the 30-year average of 22.73 inches.

The 1981 crop season was very productive even though growing degree days averaged 2 percent below normal for the growing season. Growing season rainfall, from April 1 to September 30, was almost 6 percent above normal, but was less than the heavy amounts of precipitation that fell during that period in 1980. The season ranged from a very dry May to a very wet October, which slowed normal harvesting progress.

Total rainfall for the 1981 growing season averaged 22.6 inches. This was 4.3 inches less than 1980's precipitation total of 26.9 inches, but 1.2 inches above normal (1941-70). August was the wettest month in 1981, accounting for 23 percent of the growing season rainfall. In addition to August, April and June were wetter than normal. Other months of the growing season averaged less than normal amounts of precipitation. May's average rainfall, 1.7 inches, was less than 50 percent of normal.

Heavy August rains provided essential moisture for corn, soybeans, and third crop hay. Harvesting of many of Wisconsin's specialty crops got underway in September. October was an extremely poor harvesting month in 1981 due to frequent showers. Mild Indian summer weather arrived in November and stayed for almost three weeks. The mild weather enabled most farmers to complete harvesting and fall field work prior to Thanksgiving.

CROP SUMMARY: All Crops, Wisconsin, 1980-81

Crop	1981					1980

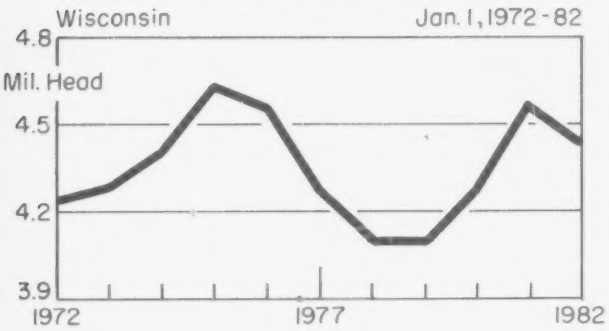
1/December 1 previous year. 2/Does not include commercial broilers. 3/Not published to avoid disclosing individual operations. 4/Turkey breeder hen value not included.

The number of cattle and calves on Wisconsin farms January 1, 1982 totaled 4,450,000 head, a decrease of 100,000 head from the same date a year earlier.

There were 1,830,000 milk cows that had calved in Wisconsin as of January 1, 10,000 more than on the same date in 1981 and the highest total since January 1, 1972 when Wisconsin's milk cow herd totaled 1,832,000 head. Beef cows that have calved came to 257,000 head, down 22,000 from a year earlier and down 93,000 head from 1976 when the state beef cow herd totaled 350,000.

Milk replacement heifers that weighed 500 pounds or more totaled 783,000 on January 1, up 3,000 from a year earlier. Beef replacement heifers over 500 pounds totaled 53,000 on January 1. This was a decrease of 10,000 head from January 1, 1981 and the lowest total since 1978 when the state beef cow replacement herd totaled 45,000. Other heifers weighing 500 pounds or more totaled 80,000 head, up 3,000 head from year-earlier totals.

CATTLE INVENTORY



The number of steers weighing 500 pounds or more on January 1 totaled 334,000 head, a decrease of 36,000 from the previous year. Bulls at 500 pounds or more came to 45,000 head, equal to year-earlier totals. The number of heifers and steers under 500 pounds came to 1,068,000 head on January 1. This was a decrease of 48,000 from the 1,116,000 head on hand a year earlier.

All sheep and lambs on Wisconsin farms January 1, 1982 totaled 125,000 head, down 2,000 head from a year ago. Stock sheep numbered 110,000 head, down 1,000 from January 1,1981. Ewes at 81,000 were down 1,000 from a year earlier. The 5,000 wethers and rams on hand were equal to the number on hand the previous year. All lambs at 24,000 were equal to 1981's January 1 inventory. The 1981 lamb crop of 119,000 was an increase of 9,000 from 1980. There were 15,000 sheep and lambs on feed January 1 compared with 16,000 a year ago.

Wisconsin hog producers had 1,380,000 hogs and pigs on farms December 1, 1981. This was down 300,000 head from a year earlier and the lowest inventory since December 1, 1977 when the state swine herd totaled 1,378,000 head.

All chickens in Wisconsin on December 1, 1981 totaled 5,130,000, up 80,000 birds from the previous year. The number of laying hens on farms as of December 1 came to 1,490,000, down 161,000 from the previous year.

The total value of Wisconsin's cattle herd, including dairy and beef, was nearly $3.1 billion on January 1, 1982. This was a decrease of $478.5 million from the previous year. Cattle and calves were valued at $690.00 per head, down $90.00 from January 1, 1981. Hog values were down significantly. The total swine herd in the state was valued at $89 million on January 1, 1982. This was a decrease of over $30 million from the previous year. Hogs were valued at $64.50 per head, down $6.50 from the previous year. Sheep and lambs had a value per head of $64.00, down significantly from the value of $85.00 per head one year earlier.

Cash receipts from the sale of livestock and livestock products totaled $3.8 billion in 1981, up 2 percent from 1980. Cash receipts from livestock accounted for over 78 percent of Wisconsin's total 1981 agricultural cash receipts of $4.9 billion. Of the total $3.8 billion in cash receipts from livestock and livestock products, over $2.9 billion came from dairy products, $684 million came from meat animals, $116 million came from poultry and eggs, and $53 million came from the sale of other livestock.

DAIRY

Dairy herds in Wisconsin produced over 22.7 billion pounds of milk in 1981, an increase of 1.5 percent from 1980 and a record high. Wisconsin's average milk cow produced 12,441 pounds in 1981, an increase of 110 pounds over the previous year. The average cow produced 462 pounds of milkfat. The state's dairy herd included an average of 1,825,000 milk cows, 10,000 more than 1980 and the highest average since 1972 when the state milk cow herd averaged 1,831,000 cows. Wisconsin accounted for more than 17 percent of the nation's milk output in 1981.

Income from dairying exceeded $2.9 billion in 1981, 7 percent more than 1980. Monthly milk prices averaged $13.38 a hundredweight in 1981, up 71 cents from the previous year. Milk prices peaked during January when they averaged $13.65. Monthly milk prices in 1981 were well above 1980 with the exception of November and December. It was the eighteenth consecutive year that the annual milk price exceeded the previous year.

Prices received for milk cow replacements averaged $1,180 per head in 1981, $20 more than 1980's average of $1,160. Replacement prices peaked in May when they averaged $1,230 per head. Cull cow prices averaged $42.50 in 1981, down $4.20 from 1980 and down $8.40 from 1979. Cull cow prices peaked in April at $45.20 and then gradually slipped to an average of $36.50 in December. Prices received for calves averaged $103 per hundredweight in 1981, $3 less than 1980's average of $106 and $10 less than 1979's average of $113. Calf prices peaked in September at $114.

Wisconsin is the nation's leading cheese-producing state, accounting for 37 percent of the U.S. total in 1981. Total cheese production in 1981 came to 1.56 billion pounds, a record and up 5 percent from the 1980 record output of 1.48 billion pounds. There were 1.08 billion pounds of American cheese made in 1981, an increase of nearly 9 percent from the previous year. Italian cheese production at 306.8 million pounds in 1981 was down 2 percent from the previous year. Swiss cheese production totaled 37.9 million during the year, down over 2 percent from the 38.8 million pounds produced in 1980. Processed cheese foods enjoyed a healthy production gain in 1981. Production of processed cheese foods and spreads totaled 154.8 million pounds, a gain of 11 percent from 1980.

Wisconsin reigns as the nation's leading producer of butter. Butter production in 1981 totaled 295.2 million pounds, a gain of 2 percent from 1980. Production of nonfat dry milk came to 144.1 million pounds in 1981, nearly 21 percent more than in 1980. Dried buttermilk production amounted to 14.8 million pounds, an increase of 3 percent from 1980. A total of 8.4 million pounds of malted milk powder was manufactured in 1981, nearly 4 percent more than 1980. A total of 527.4 million pounds of whey solids was processed during the year, up nearly 8 percent from year-ago totals.

CORN - Production, Marketing and Prices

Corn is easily Wisconsin's most important crop. Corn accounted for over 9 percent of Wisconsin's cash receipts from farm marketings in 1980. Cash receipts from corn sales totaled $430.9 million in 1980, up 62 percent from 1979's total of $265.7 million. Cash receipts from corn more than doubled in the 1977-80 period.

Wisconsin's 1981 corn crop totaled 378 million bushels, up 8 percent from 1980 and a record high. Wisconsin moved ahead of Ohio in 1981 to rank sixth nationally in corn production. Wisconsin growers harvested an average of 108 bushels per acre in 1981, also a record high. It was the fourth consecutive year that state average yields per acre have increased. A total of 3.5 million acres of corn were harvested for grain in 1981, an increase of 150,000 acres from 1980. Since 1960, Wisconsin's corn acreage harvested for grain has ranged from a low of 1,487,000 acres in 1964 to a high of 3,500,000 acres in 1981.

State corn yields have been steadily increasing. Since 1960, state corn yields have ranged from a low of 62.5 bushels per acre in 1960 to a record high 108 in 1981. Wisconsin's corn yields have averaged over 103 bushels per acre over the past 5 years.

The value of Wisconsin's 1981 corn crop was $850.5 million, an 18 percent decrease from the previous year's value of over $1 billion. The season average price for corn was $2.25 per bushel, down 71 cents from 1980 and the lowest season average price since 1978, when corn prices averaged $2.14 per bushel. Since 1960, corn prices have ranged from a low of $1.02 per bushel in 1960 to a high of $3.08 in 1974.

Corn grain production has gradually moved north in Wisconsin. Back in 1950, the state's corn production was primarily centered around the south central crop reporting district. Since that time other crop reporting districts have developed significant corn production. These districts include the southwest, west central, east central, and southeast. There is still relatively little corn grain production in the state's three northernmost crop reporting districts. In 1981 these three districts accounted for only 11 percent of the state's total production.

Dane County is the state's premier corn-producing county. Dane County growers harvested 24.8 million bushels in 1981, a decrease of 4.5 million bushels from the previous year, but still high enough to enable Dane to edge out Rock County, the state's number two corn-producing county. Rounding out the state's top ten corn-producing counties, which accounted for 41 percent of Wisconsin's 1981 production, were Grant, Columbia, Dodge, Lafayette, Walworth, Jefferson, Green, and Sauk.

The United States annually produces about half of the world's corn, and the U.S. acreage planted to corn has accounted for about 30 percent of the acreage planted to principal crops in recent years. On the average, about 10 million acres are harvested for silage and forage and the balance is harvested for grain. The acreage harvested for grain since 1950 has ranged from a low of 54.6 million acres in 1969 to a high of 74.6 million acres in 1981. The lower acreages in the sixties were associated with acreage control programs which were relaxed during the seventies. In the last five years, the acreage harvested for grain has averaged over 72 million acres.

U.S. corn production is heavily concentrated in the Corn Belt, which normally includes the following states: Iowa, Illinois, Indiana, Ohio, and Missouri. The Corn Belt states accounted for 53.9 percent of the U.S. corn production during 1981. The Lake States, Minnesota, Wisconsin, and Michigan, accounted for 17 percent of the U.S. total during this past year. The Northern Plains states of Nebraska, South Dakota, and Kansas were responsible for 13.9 percent of the U.S. corn production. Corn is harvested for grain in 41 of 50 states; however, production is normally associated with the Corn Belt. The most important producing states are Illinois and Iowa, which generally grow about 40 percent of total U.S. production.

CORN: Production, Farm Use, Sales and Value, Wisconsin

Crop year	Production	Used on farms where produced	Sold	Sales as percent of production	Season average price per bushel	Value

1984							
1985							

Based on annual objective yield survey results, Wisconsin's 1981 corn plant population averaged 20,000 plants per acre. This was an increase of 200 plants from the previous year. In order to obtain this information, objective measurements are made by a trained field staff from Wisconsin and other major corn states which represent 83 percent of total U.S. corn production. Information in the tables represents sample data which are subject to sampling variability, but do show plant population trends over years.

Measurement of row spacing for corn for grain in Wisconsin showed some decline in 1981 as opposed to 1980. Wisconsin's average row width for 1981 was 36.2 inches compared with 36.3 inches the previous year.

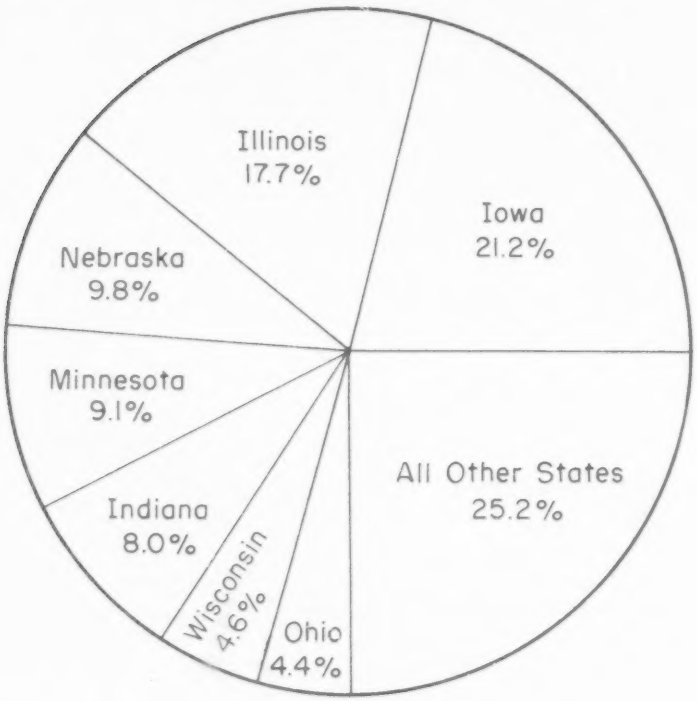
CORN FOR GRAIN, U.S., 1981
Production



Percent by State

OFFICIAL U.S. GRADING STANDARDS FOR CORN GRADES, GRADE REQUIREMENTS, AND GRADE DESIGNATIONS

Grade	Minimum test weight per bushel	Maximum limits of			
		Moisture	Broken corn and foreign material	Damaged kernels	
				Total	Heat-damaged kernels
	Pounds	Percent			
U.S. No. 1	56	14.0	2	3	.1
U.S. No. 2	54	15.5	3	5	.2
U.S. No. 3	52	17.5	4	7	.5
U.S. No. 4	49	20.0	5	10	1.0
U.S. No. 5	46	23.0	7	15	3.0
U.S. sample grade	U.S. sample grade corn does not meet the requirements for any of the grades from U.S. No. 1 to U.S. No. 5, inclusive; or contains stones; is musty, sour, heating; has any commercially objectionable foreign odor; or is otherwise of distinctly low quality.
